                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         546
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         541 GCCTCC

APPLICANT: Campochiaro, Peter A.
APPLICANT: Dixon, Katharine H.
APPLICANT: Brazzell, Komlus K.
TITLE OF INVENTION: METHOD FOR TREATING OCULAR
TITLE OF INVENTION: NEOVASCULARIZATION
TITLE OF INVENTION: NEOVASCULARIZATION
TITLE REPRENUE: 4-31881A
CURRENT APPLICATION NUMBER: US/10/080, 797
CURRENT PILING DATE: 2002-02-21
NUMBER OF SEQ ID NOS: 21
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 2
LENGTH: 551
                                                                      Sequence 30, Application US/09873676

Sequence 30, Application US/09873676

Patent No. USC02007728941

GENERAL INFORMATION:

APPLICANT: MacDonald, Nicholas J.

APPLICANT: Sim, Kim L.

IITLE OF INVENTION: Angiostatin and Endostatin Binding Proteins and Methods of Use

FILE REPERBNCE: 05213-0378 (43170-255933)

CURRENT APPLICATION NUMBER: US/09/873,676

CURRENT PILING DATE: 2001-06-04

PRIOR PILING DATE: 2001-06-04

PRIOR PILING DATE: 2001-05-08

NUMBER OF SEQ ID NOS: 123

SOFTWARE: Patentin version 3.1

SEQ ID NO 30

LENGTH: 552
                                                                                                                                                                                                                            Use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CACACCACCAGGACTTCCAGCTGGTGCTGCACCTGGTGGCCTGAACAGCCGGAGCG 198

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thomas L. Casavart.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        477

An isolated nucleic acid molecule for the treatment of angiogenesis-related disorder, such as cancers or diabetic retinopathy, encodes an endostatin protein.

Claim 14; Fig 3; 56pp; English.

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration,

The present invention relates to a new method of producing a protein, and the present inventional protein domain, that is either C- or N-terminus of the buch as functional protein domain, that is either C- or N-terminus of the privary translational product (PTP) of a gene, where the profein has construct comprising a regularory DNA and a DNA targeting segment. This method is useful for producing a functional protein domain of proteins such as regulatory blood products and monoclonal antibodies. The method described in the invention allows controlled and precise modification of the host cell genome in order to produce functional protein domain (PPD). The amount of exogenous sequence to be integrated in the host cell genome itself is used. Use of the host cell genome present in the host cell genome itself is used. Use of the host cell sequence encoding sequence, the original coding sequence present in the host cell genome itself is used. Use of the host cell sequence encoding sequence, the original coding sequence, and also maying use of the same post-transcriptional (e.g., splicing) and/or post-translational (e.g., splicing) and/or post-translational (e.g., splicing) and/or post-translational (e.g., splicing) processes that are complementary DNA coding for the maturation of FPD. The use of a single complementary DNA coding for the expression vector. The present amino acid complementary DNA coding for the expression pertent or in the invention. This fusion protein contains the mouse Ig signal peptide in invention. This fusion protein contains the mouse Ig signal peptide (mIGSP) sequence fused to exons 38-41 of the human COLIBAL sequence
                                                                                                                         Producing functional protein domain by growing host cell transfected with DNA construct having regulatory DNA and DNA targeting segment, and optionally culturing homologously recombinant cell and collecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   51 PWRADDILASPPRLPEPOPYPGAPHHSSYVHLRPARPTSPF----AHSHRDFOPVLHLVA 106

monoclonal antibody; recombination-derived alteration; blood product WO200210372-A1 Homo sapiens Domain Region Region Region Domain Region Region Region Κeγ 

The present invention relates to a new method of producing a protein, such as functional protein domain, that is either C. or N-terminus of the primary translational product (PTP) of a gene, where the protein has biological activity which is distinct from PTP. The method of the invention involves growing a host cell transfected with a DNA construct comprising a regulatory DNA and a DNA targeting segment. This method is useful for producing a functional protein domain of proteins such as regulatory factors, blood products and monoclonal antibodies. The method described in the invention allows controlled and precise modification of the host cell genome in order to produce functional protein domain (FPD). The amount of exogenous sequence to be integrated in the host cell genome is every limited since, as coding sequence, the original coding sequence present in the host cell genome itself is used. Use of the host cell genome treative alteration of such ociding sequence present in the same post-transcriptional (e.g., splicing) and/or post-translational (e.g. glycosylation, phosphorylation) processes that are cumulary applied in vivo for the maturation of FPD. The use of a single regulatory unit eliminates the necessaty of manipulating the complementary DNA coding for the EPP, and engent coding for the FPD, and adapt it to the expression vector. The segment coding for the PPD, and coding for the protein domain used to illustrate the method of the invention Producing functional protein domain by growing host cell transfected with DNA construct having regulatory DNA and DNA targeting segment, and optionally culturing homologously recombinant cell and collecting protein. Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases.

Claim 11; SEQ ID NO 3010; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ66305), and also encompasses polypeptides 90% identical and polymuclectides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymuclectides, antibodies against human ovarian antigens, and the use of ovarian antigen polymuclectides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related

disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and valintis), immune disorders (e.g., conganital and acquired immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., ansemia), cardiovascular disorders, cespiratory disorders. Ovarian antigen polypeptides and urinary system disorders. Ovarian antigen polypeptides and condition expression or activity. The polymucleotides may further be used for gene therapy, chromosome mapping, in the modulate ovarian antigen of andividuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published\_pot\_sequences \$

Diagnosis and monitoring of liver disease by measuring collagen type XVIII levels - with elevated levels indicative of disease, especially cirrhosis or hepatocellular carcinoma.

Example 6; Fig 8; 56pp; English

A method has been developed for the detecting liver disease. The method comprises: (a) reacting a patient sample with antibodies (Ab) specific for collagen type XVIII (coll8); (b) measuring the amount of Ab-antigen complex (C) formed as indicator of the amount of coll8 present; (c) similar analysis of a non-diseased control; and (d) comparing the amounts of coll8 in the two samples to detect presence or progression of disease. Elevated levels of Coll8 are: (i) indicative of disease, specifically cirrhosis; and (ii) predictive of the prognosis of disease, specifically hepatocellular carcinoma (there is a relationship between Coll8 maxMalevels and tumour size and necrosis, and survival times are significantly higher in patients with higher Coll8 levels. The method provides non-livasive, early and accurate diagnosis of liver disease. The present chain from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                             Η.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine encotatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

                                                                                                             The present invention describes a humanised baculovirus (I) which comprises a modified baculovirus genome having a nucleic acid molecule encoding a therapeutic agent and a polypeptide which functions to target the baculovirus to at least one cell type. Also described is a not can be used in gene therapy. The baculovirus is useful in the manufacture of a medicament for the treatment of cancer, particularly protein, which is specified in the exemplification to the present sequence represents the human endostatin protein, which is specified in the exemplification of the present invention. N.B. The present sequence is not given in the specification but is referred to in Claim 24 as Genbank accession number NM_130445

                                                                                                                                          comprising a DNA encoding an anti-anglogenic protein, which shows thereapeutic effects on rheumatoid arthritis. The composition is useful for treating rheumatoid arthritis and the gene therapy is effective, lasting for 14 days. The present sequence is the protein sequence for human collagen XVIII. Endostatin, which consists of the C-terminal 183 residues of collagen XVIII, was used as an anti-anglogenic protein

The invention relates to an isolated polymucleotide (1) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences consisting of at least 20 contiguous cresidues of (a); (d) sequences that hybridize to (a), under moderately to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596 to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596 to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596 to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596 to (a); or (f) degenerate variants of (a); Polypeptides (aBP68596) to (a); or (f) degenerate variants of polypeptides are useful in treating pencreatic cancer antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pencreatic cancer or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly con NIPO at fbp. Wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1348 INSPLSGGMRGIRGADFQCFQQARAVGLAGIFRAFLSSRLQDLYSIVRRADRAAVPIVNL 1407

Novel human type alpha-1 (XVIII) collagen is characterised by 10 triple helical domains containing the GXYGX'Y' motif (where X, Y, X' and Y' represent any amino acid), the helical domains being separated and flanked by non-triple helical regions which may provide flexibility. Alpha-1 collagen is expressed in multiple tissues, especially liver, lung and kidney. A claimed plasmid comprising alpha-1 collagen nucleic acid (see AAT84484) and an expression control sequence can be used to express recombinant collagen in prokaryotic or eukaryotic (especially mammalian) host cells. The alpha-1 collagen may be used to treat a patient suffering from a disease associated with cartilage degradation, and for supplementing collagen. It can also be used as a connective tissue filler (e.g. for plastic surgery), can be interposed between a dermal equivalent Nucleic acid encoding human alpha-1 collagen - for production of recombinant alpha-1 collagen, for use in the treatment of cartilage Claim 1; Col 23-30; 35pp; English. 93US-00159784. 93US-00159784 (HARD ) HARVARD COLLEGE WPI; 1997-350247/32. In vitro diagnosis and monitoring of endometriosis, comprises detecting reduced expression of specific gene products, e.g. from the fibronectin

Claim 1; Page 12-13; 21pp; German.

The present invention relates to a method for the in vitro diagnosis of endometriosis by determining the amount of gene product from at least one specific gene in a patient sample and comparing this with the amount of gene product in a patient sample. A reduced level is indicative of endometriosis. The gene products may be fibronectin, p27, reticulocalbin, albeithed dehydrogenase 6, gravin, phospholipase C epsilon, elastin, insulin-like growth factor binding protein-2, alpha-2 type IV collagen, transmembrane receptor PRTX, collagen type XVIII alpha 1, platelet transmembrane receptor alpha, laminin M chain, subtilisin like protein PACE4 or nidogen. The method is useful for initial diagnosis of endometriosis, and also for monitoring progress and treatment of the disease. The present sequence is human collagen type XVIII alpha 1

                                                                                                                                                                                                Peptide
                                                                                                                                                                                                                                        Peptide
mammalian endostatin. The method comprises identifying mimetics of mammalian endostatin. The method comprises identifying a compound having atomic coordinates with non-trivial similarity to selected coordinates of atomic coordinates of atomic coordinates of atomic coordinates of atomic coordinates of compounds in a library of candidate compounds, (b) comparing the library of atomic coordinates to the selected coordinates of a mammalian endostatin and (c) selecting from the library at least one candidate compound on the basis of selection criteria which include similarities between the aromic coordinates of the selected candidate compound and the atomic coordinates of the mammalian endostatin. The invention also describes the use of an anti-angiogenic fragment of endostatin comprising a domain selected from a heparin binding domain, are receptor binding domain, and exposed on alpha helix A domain, and a carbohydrate recognition domain (CRD) domain. The methods can be used for designing and and selecting endostatin mimics. The compounds identified can be used for treating undesired angiogenesis, e.g. tumours. This sequence compressents human alphal(XVIII) collagen which is used in the description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   574

A method has been developed for the detecting liver disease. The method comprises: (a) reacting a patient sample with antibodies (Ab) specific for collagen type XVIII (Coll8); (b) measuring the amount of Ab-antigen complex (C) formed as indicator of the amount of Coll8 present; (c) similar analysis of a non-diseased control; and (d) comparing the amounts of Coll8 in the two samples to detect presence or progression of disease. Elevated levels of Coll8 are: (i) indicative of disease, specifically hepatocellular carcinoma (there is a relationship between Coll8 mRNA levels and tumour size and necrosis, and survival times are significantly higher in patients with higher Coll8 levels). The method provides noninvasive, early and accurate diagnosis of liver disease. The present sequence represents the sequence common to mouse alpha-1 (XVIII) collagen chain from the present invention

Sequence 1288 AA;

The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosts of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, nubosals, Osler Webbar Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectesia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arthrivovenous malformations, isohaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin protein sequence
